

NOW YOU HAVE THE OPTION:  
**DILATION IS NO LONGER THE ONLY OPTION FOR A  
THOROUGH EYE EXAM**

**Protecting Your Vision for Today and Tomorrow**

In order to provide the highest level of eye care, Dr. Coley urges **all patients** be dilated (unless pregnant or nursing). In addition to having your eyes dilated, Dr. Coley recommends we also take a **digital retinal image** to precisely record and monitor your eye health. In case you choose not to be dilated today, the digital retinal image (**non-covered service of \$29.00**) provides a valuable method for Dr. Coley to view and discuss the health condition of the inside of your eyes.

**Attention: All Medicare Patients will be dilated.**

**Dilated Exam**

**vs.**

**Digital Retinal Imaging**

1. Blurred near vision for 2-4 hours
2. Sensitivity to light for 3-5 hours
3. Only the doctor can see the retina
4. Less detail record of retina

1. No blurred vision
2. No light sensitivity
3. Patient can see his/her retina
4. More detail record of retina

Please check which of the following you prefer to have done today.

\_\_\_\_\_ **I will be able to be dilated and would also like to have the digital imaging.** I understand that there will be an additional \$29 fee.

\_\_\_\_\_ **I would prefer to have the digital imaging** instead of having my eyes dilated today. I understand that there will be an additional \$29 fee. (Dilation may still be necessary in some circumstances.)

\_\_\_\_\_ **I would prefer to have my eyes dilated.** I understand that my eyes will be blurred and sensitive to sunlight for several hours.
