

## Pervious Pavements, SoftWalk Trails and Tracks

Rubberway® Pervious Pavements are constructed of a recycled crumb rubber granulate which creates an open grid surface allowing for rapid drainage.

Resilient enough to provide a more ergonomically sound surface, yet firm enough to be suitable for high impact use.

Typically installed in a single layer at a custom thickness, Pervious Pavements are suitable for sidewalks, pathways, jogging and walking trails, driveways, and parking lots.

*Whether you choose single or multi-layered, Rubberway® systems are easy to maintain and repair when needed. Maintenance manuals and Patch Kits are available through USSA, Inc.*

**Rubberway® Pervious Pavements**

**Rubberway® SoftWalk™**

Rubberway® SoftWalk™ is designed to offer pedestrians and joggers a low-impact, good traction, firm yet resilient surface. The poured, multi-layered system provides a safe and attractive option for sidewalks, tracks, and pathways that will beautify our communities with colorful visionary designs and recycled materials. This ADA compliant surface allows pedestrians and wheelchairs to proceed safely.

By offering various densities, these systems can be modified to become a porous or non porous surface.
